# Java语言程序设计 - 作业三

Name	学院	StudentID
赵智韬	资源与环境学院	201928007010048

# 简介

本项目为 中国科学院大学 Java语言程序设计19-20春季 课程作业

独立完成, 部署于阿里云服务器 —— 项目地址链接

## 1. 程序设计作业要求:

- 从文件、网络或**数据库读取数据**(格式自定、数据自定),显示**统计结果**(包括图形二种以上), **用户界面自定**
- 可不超过3人组队完成,说明各自工作(仅设计及文档得分系数0.95,编程及调试得分系数1.05)
- 打包提交,命名格式:姓名\_学号,提交内容包括:设计文档、源代码文件、编译后的文件、分工情况

## 2. 技术栈:

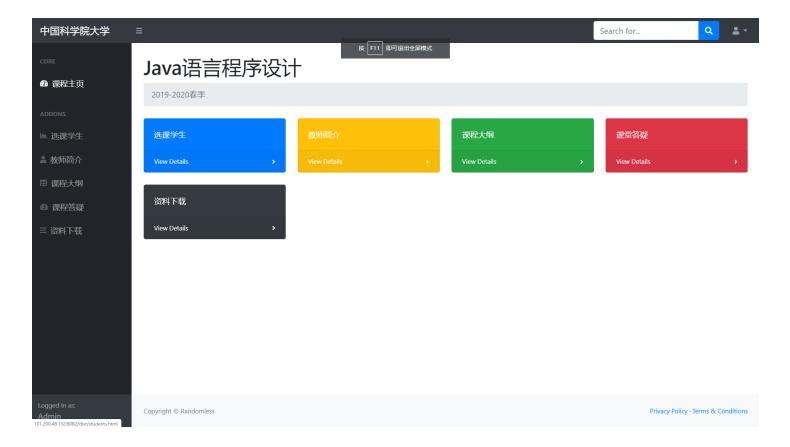

- SpringBoot 2.2.0
- BootStrap 4
- Thymeleaf
- Mybatis
- MySQL

# 任务分工

#### Student实体类

```
import lombok.Data;

@Data
public class Student {
    private String name;
    private String sex;
    private Integer age;
    private String college;
}
```

# 学生信息数据库

```
DROP TABLE IF EXISTS `student`;
/*!40101 SET @saved cs client = @@character set client */;
/*!40101 SET character_set_client = utf8 */;
CREATE TABLE `student` (
  `id` int(11) unsigned NOT NULL AUTO_INCREMENT,
  `name` varchar(100) NOT NULL DEFAULT '',
 `sex` varchar(50) DEFAULT '',
  `age` int(11) DEFAULT NULL,
  `college` varchar(100) DEFAULT NULL,
 PRIMARY KEY (`id`)
) ENGINE=InnoDB AUTO_INCREMENT=229 DEFAULT CHARSET=utf8 ROW_FORMAT=COMPACT;
/*!40101 SET character_set_client = @saved_cs_client */;
-- Dumping data for table `student`
INSERT INTO `student` VALUES
(33,'Rank','男',19,'资源与环境学院'),(34,'Adans','男',20,'软件学院')
(33,'Rank','男',19,'资源与环境学院'),(34,'Adans','男',20,'软件学院')
.....略
LOCK TABLES `student` WRITE;
```

#### Controller

```
@Controller
public class StudentController {
    @Autowired
    private StudentService studentService;

@GetMapping("studentjson")
    @ResponseBody
    public List<Student> jsonstudent() { return studentService.findAll(); }

@RequestMapping("admin")
    public String admin(){ return "admin"; }

@RequestMapping("dist/index")
    public String dashboard(){ return "dist/index";}
```

#### Service层

```
@Service
public class StudentService {
    @Autowired
    private StudentMapper studentMapper;

public List<Student> findAll(){
    return studentMapper.findAll();
    }
}
```

#### 请求后台数据统计

```
$.ajax({//JQuery的ajax请求方法
          type: "GET",//以GET方式请求
          url: "/studentjson",//请求的路径是/studentjson, 即我们有json数据返回的路径 restful风格
          dataType: "json",//数据格式, json格式
          async: false,//是否异步请求
          success: function (result) {//请求成功执行的方法
              //将请求到的结果拼装进我们自行的空数组productName与nums
              for (var i = 0; i < result.length; i++) {</pre>
                 agearray.push(result[i].age);
                 sexarray.push(result[i].sex);
                 collegearray.push(result[i].college);
              }
          },
          error: function (errorMsg) {//请求成功执行的方法
              alert("获取后台数据失败!");
          }
       });
```

# 学院分布信息 画图 (Chart.js)

```
console.log("college stat",college_stat);
var myLineChart = new Chart(ctx, {
  type: 'bar',
  data: {
    labels:["计算机学院","资源与环境学院","微电子学院","物理学院","生物学院","软件学院"],
   datasets: [{
     label: "人数",
     backgroundColor: "rgba(2,117,216,1)",
     borderColor: "rgba(2,117,216,1)",
     // 此处修改为统计数组college_statistic
     data: college_stat //[20,30,60,50,40,31],
   }],
  },
  options: {
    scales: {
     xAxes: [{
       time: {
         unit: 'month'
       },
       gridLines: {
         display: false
       },
       ticks: {
         maxTicksLimit: 6
       }
     }],
     yAxes: [{
       ticks: {
         min: 0,
         max: 60,
         maxTicksLimit: 5
       },
       gridLines: {
         display: true
       }
     }],
    },
   legend: {
     display: false
   }
});
```
